Energy StarSM Programs for Trane High Efficiency Products.

Energy StarSM is a voluntary awareness communications and marketing campaign developed by the U.S. Department of Energy, Environmental Protection Agency (EPA), in 1992 to promote energy efficiency in a multitude of products, including heating/cooling equipment.

Trane has partnered with EPA to label their high efficiency systems with the Energy StarTM label so you can easily identify products which are more energy efficient and help reduce our whole country's total energy use.

As an energy Star Partner, Trane has determined that some models meet the Energy Star guidelines for energy efficiency.

Which Trane Residential Products Qualify?

All Trane air conditioner and heat pump units with a SEER (Seasonal Energy Efficiency Ratio) of 12 or

above, HSPF (Heating Seasonal Performance Factor) of 7.4 or above, and all Trane gas furnaces with an AFUE (Annual Fuel Utilization Efficiency) of 90% or above meet or exceed the minimum efficiency required by the EPA for Energy StarTM recognition.

You will easily recognize these more efficient products because they will be identified by the EPA Energy StarTM logo. Trane qualified products display an Energy StarTM label on the front of the product and on the shipping carton.

How Will You Benefit?

Choosing a Trane Energy Star Comfort System assures you of lower energy use, improved indoor air quality, attractive design appearance, and most important, improved comfort for your new home.
